Dreer's Reliable Flower Seeds

FOR SUMMER AND AUTUMN SOWING

On the following 19 pages we give a list of Seeds of the **Best Hardy Perennials**, which are now so deservedly popular. With little trouble you can have by sowing this summer or early autumn, an abundant supply of Columbines, Canterbury Bells, Foxgloves, Gaillardias, Hollyhocks, Larkspurs, Forget-me-nots, Daisies, Sweet Williams, etc., etc., for flowering in 1934.

Hardy perennials are easily grown from seed. In many cases they are a little slower than annuals, but with intelligent care they are successfully raised, and from seed is an excellent way to develop a stock of perennials.

The list also includes a choice selection of flower seeds for the greenhouse or conservatory, such as Antirrhinums, Calendulas, Cinerarias, Cyclamens, Primulas, etc.

To assist our patrons in securing the maximum results from seeds, we issue a leaflet, "Growing of Flowers from Seed," which we will gladly enclose with any order on request.

A PRETTY LITTLE ROCK GARDEN

COLLECTIONS OF HARDY PERENNIAL FLOWER SEEDS

The following collections are made up of the popular, easy to grow sorts that invariably do well under the conditions found in the average garden. With each collection is included a leaflet Growing of Flowers from Seed, and if the instructions given therein are followed, success is almost certain.

At the reduced prices at which the various collections of flower seeds are offered, we regret that no changes in the varieties can be made.

No. 3551. Twelve Rock Garden Hardy Perennial Flower Seeds

There has developed within the last year or two a wonderful demand for Rock Gardens, and even in gardens of comparatively small size, space has been allotted to the Rock Garden. If you can secure the rocks, it is a comparatively easy matter to fill the spaces by sowing the seeds contained in this collection, most of which would give a full crop of flowers next year. The collection is made up of such popular kinds as Golden Alyssum, Rock Cress, Columbine, Primula, Aubrietia, and others equally desirable.

Meconopsis Regia (New)

3137 A grand new species discovered in 1928 in Eastern Nepal, growing at a height of 14,000 feet. It may be described as a very handsome, robust, biennial plant, reaching under good cultivation anything from 3 to 5 feet in height. The winter condition of this species is particularly handsome. The long pale green leaves, often 15 inches in length, become covered with soft silvery hairs, forming a rosette well over 2 feet across, an ornament in itself and unmatched by any other species of *Meconopsis*. From the centre of this rosette there issues a central stem clothed with smaller leaves and much branched. In June the first flowers open and provide a display for several weeks. The color is a beautiful soft yellow, and on well-grown specimens the flowers are from 4 to 6 inches in diameter, enlivened by a cluster of orange stamens. Its great enemy is excessive wet during winter months. If this can be guarded against, there is no difficulty attending the cultivation of this fine new-comer. It has received all the honors that can be bestowed on a plant—both the Royal Horticultural Society's Award of Merit and the First-Class Certificate. Pkt., 50 cts.; 3 pkts., \$1.25.

DREER'S PERFECT PANSIES

For best results you must start with a good strain. The finest Pansies are, as a rule, shy seeders, which accounts for the difference in the price of the various mixtures offered.

About the middle of August is the best time for starting Pansy seeds for early spring blooming, as this allows the plants to go into winter in vigorous condition. A soil containing a proportion of leaf mold, well enriched with well-decayed cow manure, will be the most satisfactory for the growing of this flower, and it should be well dug and made fine and level.

Sow the seeds in drills, covering them not more than four times their diameter and firming the soil well above them. The seeds germinate in from eight to twelve days, and should not be allowed to dry out during this period. Covering the seed bed with newspapers will prevent this and hasten somewhat the period of germination.

As soon as the plants are up and large enough to handle, they should be thinned out or transplanted to stand nine inches apart.

New Hardy Everblooming Climbing Roses

THE NEW DAWN THE EVERBLOOMING DR. W. VAN FLEET

The First Plant Patented Under the United States Patent Laws.

A counterpart of the beautiful, popular, flesh-pink Rose Dr. W. Van Fleet, excepting that it is perpetual flowering throughout the season.

Patent Number 1, the first patent issued August 18, 1931, under the new Patent Law has been granted to the originators of the New Dawn Rose, giving them the sole rights for the propagation of this desirable new variety.

This new Rose is a sport from Dr. Van Fleet which is universally acknowledged as the best and most popular American Climbing Rose. This new variety is identical in every way with its parent in size and formation of its long pointed flesh pink buds and double flowers, but blooms continuously

throughout the summer and fall months. Really the first worth while Hardy Everblooming Climber introduced. Strong two-year old pot-grown plants, \$1.50 each.

Hardy Climbing and Rambler Roses

American Pillar. A single flowering variety of great beauty.

The flowers are of large size, 3 to 4 inches across, of a lovely shade of pink with a clear white eye and cluster of yellow stamens. These flowers are borne in immense bunches.

Chaplin's Pink Climber. This splendid vigorous climber with good sized, shapely, double flowers of a rich lively pink with just a touch of salmon when first expanding makes a most effective display of color unequaled by any other sort of this type.

Climbing American Beauty. Its name is somewhat misleading, but is one of the best climbing Roses; a strong healthy vigorous grower, frequently making shoots from 10 to 12 feet long, and good sized flowers for a climbing Rose that blooms so freely; color deep rose pink, of good form and substance.

Dr. W. Van Fleet. A Rose, which on account of its dainty color and exquisitely shaped buds and flowers, has become a great favorite. The long pointed buds are of a rich flesh-pink on stems 12 to 18 inches long; splendid for cutting.

Mme. Gregoire Staechelin (*The Spanish Beauty*). An outstanding climber, a strong, vigorous, healthy grower with good foliage; one of the earliest to bloom with buds and flowers of great beauty. The buds are shapely, long pointed; the base is an iridescent pearly pink tipped with crimson as the petals first unfold into shapely, fragrant flowers.

Jacotte. A favorite variety now, but destined to find a place among the most popular, when its merits and distinct coloring becomes better known. In color a deep orangy yellow, tinted coppery red; flowers of good size, semi-double, very lasting, moderately fragrant, borne several together on long stems.

Marie Gouchault. Just like Dorothy Perkins but deeper in color, a clear geranium-pink and with healthy foliage.

Paul's Scarlet Climber. The most popular of all climbing Roses. Unequaled in brilliancy by any other variety, in color a vivid scarlet, of large size, produced in clusters of from 3 to 20 flowers on long, strong stems.

Primrose. A real hardy yellow rambler, a strong, vigorous grower of a glowing primrose yellow which color is maintained until the petals drop. Dark glossy green foliage.

Silver Moon. Different from all other Roses, with beautiful fragrant semi-double flowers four and a half inches and over in diameter; creamy white in color, petals of great substance.

Price any of the above 75 cts. each; \$7.50 per doz.; one each of the 10 varieties for \$6.50.
